SUMMARY

Product designer specializing in **complex vertical software — restaurant tech, POS, and payments** — built on a full brand design foundation. Seven-plus years spanning brand systems, responsive web, and software product, most recently as the **sole designer** at a US restaurant-technology company, reporting to the **CTO** and directing a dedicated offshore design team across a platform processing **~\$208M in annual payment volume** across **750+ active restaurant locations**. U.S. permanent residency application pending — **no employer sponsorship required**.

EXPERIENCE

Peblla, Inc.

Dec 2024 – Apr 2026

Design & User Experience Officer

Restaurant technology platform — POS, mobile POS, self-ordering kiosks and tablets, ordering apps, merchant analytics.

- **Moved 64% of checkouts tableside within three months of launch** by building the company's first handheld **Mobile POS** — a complete point-of-sale on a screen a server works one-handed mid-service, designed system first, then every primary screen.
- Built the design system behind it — component architecture, variant structure, semantic color tokens, one set covering bright front-of-house and dim back-of-house — which the offshore design team has **maintained and extended without me since**.
- Designed and launched **Points Alliance**, a cross-brand loyalty MVP built on a **dual-ledger points system** — letting independent restaurant brands share one rewards program while keeping their books separate. The pilot validated the core hypothesis: members will cross a brand boundary when the ledger between brands is trustworthy.
- Designed the interface and design system for a **B2B analytics report center used daily by 700+ store operators**, structured so a new report is assembled from existing components rather than designed from scratch.
- Scaled a zero-training **self-ordering tablet** to **411 devices in daily use** across all-you-can-eat restaurants, where guests order repeatedly through a meal without staff involvement. In usability testing, 5 of 5 untrained users completed the flow unaided.
- **Sole in-house designer, reporting directly to the CTO** at a ~25-person company — owned design direction across the full product line and acted as the **approval gate** for all output from a dedicated offshore design team, working through their design manager across a 12-hour offset.

Gong cha

Mar 2020 – Dec 2024

Lead Designer, Brand & UX/UI

Global tea franchise — US brand transformation, ordering app, loyalty program, responsive web.

- **Scaled the online ordering app and rewards system from one pilot store to 30 across California** — ~\$910K in monthly omnichannel sales and \$12K in monthly points redemption across app, web, counter POS and kiosk.
- **Drove a 140% increase in US sales** by leading the US brand transformation and digital launch, **managing 3 designers** plus contractors I sourced and briefed.
- **Lifted sessions 251.69% and first-time users 280.51% while cutting bounce rate 87.64%**, rebuilding the responsive website (50+ pages) SEO-optimized and accessibility-first.

- **Raised the site's accessibility score from 56% to 88%**, resolving 150+ violations — researched with real assistive-technology users across 5 one-on-one interviews and 39 survey responses, tested against the NVDA screen reader.
- **Got a brand stylesheet adopted by 10+ cross-functional teams across 30 stores** — none of whom reported into design.

Contract & Freelance

Mar 2019 – Mar 2021

Graphic & Brand Designer

MOD Worldwide · Iyashi Brand Studio · Independent

- Brand guidelines, venture pitch decks, television commercials, websites and apps for **Aetna, CVS, Comcast, Xfinity** and HIPPO.
